Requirements

1.

As a vanilla git power-user that has never seen GiggleGit before, I want to be able to customize GiggleGit commands to fit my work style.

As a team lead onboarding an experienced GiggleGit user, I want to make sure that GiggleGit has protections so we do not have any data leaks.

2.

As a project manager and new GiggleGit user, I want the software to work on both Mac and Windows so that my employees can work from home on their machines.

Task: Migrate data between platforms

Ticket 1: store data remotely

- Support cloud storage and ensure it works on both platforms

Ticket 2: implement cross platform handling logic

- Identify differences in mac and windows in terms of file paths and commands

3.

This is not a user story because it does not specify what kind of user and there is no benefit or reasoning provided for the stated feature. This is just asking for a functional requirement.
